Floor marking

ILIS - Floor marking

Standard

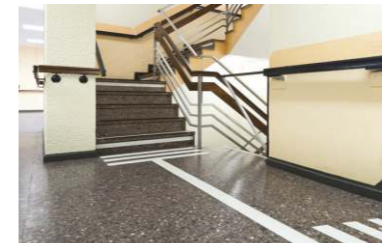

With the aim of enabling blind and visually impaired persons to reach places of information in an unassisted manner, our paste-on DIN 32984 markings alter the floor surface, so that they are easily felt with the cane or the feet or seen due to their increased contrast.

Indoor guidance lines and attention fields as well as outdoor ribbed and burred structures enable also non-restricted users to orient themselves at the first glance.

Stair markings

ILIS uses stair markings made of stripe-shaped special plastics for its installations. The anti-slip material is 1.6 mm thick and coated with glass micro beads. It is self-adhesive, 100% reversible and is thus ideally suited for use in listed historical buildings.
