Tactile plans

ILIS - Tactile plans

Cast-resin plans

Manufactured using a special moulding technology, our cast-resin plans enable a perfect visual perception. They are available with full-field shadowless backlighting. If implemented in central overview plans with crucial information such as floor plans, escape routes, or information points, this adds essential value to a building.

A very good tactile perceptibility, richness in contrast according to DIN 32975, and an optimum of ergonomics in shape and height, as well as extreme durability including special anti-graffiti protection are the characteristics of our cast-resin plans.

Feel the difference

The durability is such that we give you a 10-year-warranty of the plans' tactile and contrast quality. The graphic processing and implementation as well as the task of determining the necessary contents for orientation are always included in our prices.

The plans are available in several variants: with added voice output, with an added monitor (optionally with sign language video), or with an added inductive hearing system – any desired combination.
